Step 3 - Design the story layout & navigation

UI/UX best practices, data storytelling, and performance optimization.

Why storytelling matters in dashboards?

- ❶ A dashboard is not just a collection of charts—it must tell a story.
- ❷ The goal is to guide users through the data, helping them make decisions.

May be Good?

- A structured layout guiding users from summary to details.
- Prioritizes essential KPIs, avoids clutter

Certainly, that is unfavorable

- Too many disconnected charts with no clear focus.
- Too much data in one view

A Beginner's Guide to build an effective dashboard.

Visual hierarchy:

Z-pattern, F-pattern

Dashboard layout:

Multiple pages

Intuitive navigation:

Bookmark, sections, ...

F-Pattern

Z-Pattern

How will you structure your next Power BI dashboard using these patterns?

F-Pattern

Z-Pattern

- Z-pattern is best for high-level KPI dashboards (Executives).
- F-pattern works for data-heavy analytical reports (Analysts).
- Users should see key KPIs first, trends second, details last.
- A well-structured layout improves decision-making speed.
